

Domains of Patient Centeredness in Value Assessment

Patient Partnership

Patients should be involved in every step of the value assessment development and dissemination process.

Transparency to Patients

The assumptions and inputs into the value assessment itself – and each step in the process – should be disclosed to patients in an understandable way and in a timely fashion.

Inclusiveness of Patients

The value assessment should reflect perspectives drawn from a broad range of stakeholders, including the patient community.

Diversity of Patients/Populations

The value assessment should account for differences across patient subpopulations, trajectory of disease, and stage of a patient's life.

Outcomes Patients Care About

The outcomes integrated into the value assessment should include those that patients have identified as important and consistent with the goals, aspirations, and experiences.

Patient-Centered Data Sources

The value assessment should rely on a variety of credible data sources that allow for timely incorporation of new information and account for the diversity of patient populations and patient-centered outcomes, especially those from real-world setting and reported by patients directly. The data sources included should reflect the outcomes most important to the patients and capture their experiences to the extent possible.
