

Tré LaRosa, *Project Manager*, Foundation for the National Institutes of Health

Tré LaRosa is a Project Manager at the Foundation for the National Institutes of Health (FNIH), where he supports the metabolic disorders portfolio within the Biomarkers Consortium and serves on the Patient Engagement team. In this role, he helps advance public-private partnerships, especially those focused on biomarkers, and he advises on practical ways to design research that centers people with lived experience.

With a background in biochemistry and clinical research, Tré combines scientific training with personal insight. As a person living with cystic fibrosis, he is deeply involved in the CF community, including recently serving on the Cystic Fibrosis Foundation's Clinical Research Executive Committee. He lives in the Washington, DC area with his wife, Jessica, and their two dogs, Duncan and Leo. Outside of work, he enjoys reading, writing, and spending time outdoors.
